Nursing
What is this guide for?
This guide has been designed as a general program guide and is curated by Brock librarians. It features links to most often used resources such as databases for books, peer-reviewed journal articles, theses, dissertations, open educational resources (OERs), protocols, standards, tests, and more. Use the tabs on the left to navigate through the web page.
NEW - Sage Video Nursing Collection
A new database that provides educational videos in nursing including clinical skills, tutorials, cases, interviews, and more.

PMID: 34571041 PMCID: PMC8422852 DOI: 10.1016/j.jamda.2021.08.031
Abstract
Objective: To examine how the COVID-19 pandemic impacted use of home care services for individuals with dementia across service types and sociodemographic strata.
Design: Population-based time series analysis.
Setting and participants: Community-dwelling adults with dementia in Ontario, Canada, from January 2019 to September 2020.
Methods: We used health administ
Care Database) to measure home ca
fit to compare weekly rates of home
ratios (RRs) and 95% confidence int
therapy), sex, rurality, and neighbor

Results: During the first wave of the pandemic, personal care fell by 16% compared to historical levels (RR 0.84, 95% CI 0.84, 0.85) and therapies fell by 50% (RR 0.50, 95% CI 0.48, 0.52), whereas nursing did not significantly decline (RR 1.02, 95% CI 1.00, 1.04). All rates had recovered by September 2020, with nursing and therapies higher than historical levels. Changes in services were largely consistent across sociodemographic strata, although the rural population experienced a larger decline in personal care and smaller rebound in nursing.

Conclusions and implications: Personal care and therapies for individuals with dementia were interrupted during the early months of the pandemic, whereas nursing was only minimally impacted. Pandemic responses with the potential to disrupt home care for individuals living with dementia must balance the impacts on individuals with dementia, caregivers, and providers.

Keywords: COVID-19; Dementia; home care services; time series analysis.

Home Care Services

Community health and NURSING SERVICES providing coordinated multiple services to the patient at the patient's homes. These home-care services are provided by a visiting nurse, home health agencies, HOSPITALS, or organized community groups using professional staff for care delivery. It differs from HOME NURSING which is provided by non-professionals.

ABSTRACT

Objective: To examine how the COVID-19 pandemic impacted use of home care services for individuals with dementia across service types and sociodemographic strata.
Design: Population-based time series analysis.
Setting and Participants: Community-dwelling adults with dementia in Ontario, Canada, from January 2019 to September 2020.
Methods: We used health administrative databases (Ontario Registered Persons Database and Home Care Database) to measure home care services used by participants. Poisson regression models were fit to compare weekly rates of home care services during the pandemic to historical trends with rate ratios (RRs) and 95% confidence intervals (CIs) stratified by service type (nursing, personal care, therapy), sex, rurality, and neighborhood income quintile.
Results: During the first wave of the pandemic, personal care fell by 16% compared to historical levels (RR 0.84, 95% CI 0.84, 0.85) and therapies fell by 50% (RR 0.50, 95% CI 0.48, 0.52), whereas nursing did not significantly decline (RR 1.02, 95% CI 1.00, 1.04). All rates had recovered by September 2020, with nursing and therapies higher than historical levels. Changes in services were largely consistent across sociodemographic strata, although the rural population experienced a larger decline in personal care and smaller rebound in nursing.
Conclusions and Implications: Personal care and therapies for individuals with dementia were interrupted during the early months of the pandemic, whereas nursing was only minimally impacted. Pandemic responses with the potential to disrupt home care for individuals living with dementia must balance the impacts on individuals with dementia, caregivers, and providers.

Articles

Journal articles are scholarly works that go through a quality control process called peer-review before they are published.

MEDLINE is available via OVID, PubMed, and Web of Science Complete.

Several databases provide access to regional, national and international news articles.

A select list of databases that include scholarly articles are listed below.

- Google Scholar
  - Find Peer-reviewed papers, theses, books, abstracts and article
    societies, repositories, universities and other scholarly organiza
  - Off-Campus access to Brock resources is available to users who
    follows:
    1. Click on Scholar Settings
    2. Select 'Library links' from the left menu
    3. Type Brock in the Library links box, and click the search icon
    4. Select Brock in the resulting list
    5. Click on the 'Save' button
    6. Follow the Find it @ Brock links to access available full-text.
- CINAHL Complete
  - Covers nursing, allied health, alternative therapies, biomedicine
    administration.
  - Permitted Uses

more info...

- Nursing & Allied Health Premium
  - Healthcare information covering nursing, allied health, alternative and complementary medicine, and more.
  - Permitted Uses

more info...

- Web of Science Core Collection
  - A multidisciplinary index of citations to articles in the sciences, social sciences and humanities. Useful for finding journal articles published on a topic or to discover who has cited a particular author and/or paper.
  - Permitted Uses

more info...

- MEDLINE - via OVID
  - International literature on biomedicine, allied health fields and biological and physical sciences, humanities, and information science as they relate to medicine and health care.
  - Coverage: 1946-current
  - Permitted Uses

more info...

- Embase
  - Comprehensive biomedical database including more than 30 million records from more than 8,500 journals.
  - Notable coverage of drug and pharmaceutical research, pharmacology and toxicology as well as robust international content.
  - Coverage: 1974-current
  - Permitted Uses

Research topic

I want to find research that helps to support new nurses transition into professional practice.

Introduction

The transition of newly graduated nurses into professional practice is a complex process often accompanied by significant challenges. These individuals must adapt from academic environments to high-pressure clinical settings, necessitating efficient time management and the application of theoretical knowledge in practical scenarios. This transition period is marked by an industry need to address issues of retention and job satisfaction among new graduates, prompting the exploration of effective strategies such as mentorship programs, clinical simulations, and structured orientation practices.

Mentorship programs have been frequently highlighted in the literature as a crucial support mechanism for newly graduated nurses. Studies indicate that such programs substantially enhance job satisfaction and retention rates among new nurses [1, 2, 3, 5]. Mentorship facilitates knowledge transfer and emotional support, aiding new nurses in becoming integrated into professional culture and reducing turnover rates [1, 3, 9]. The implementation of formal mentorship structures has been linked to lower attrition rates and increased professional activities among mentees [10].

Categories of papers

Mentorship Programs

- **Description**: Investigates mentorship programs designed to enhance the transition, retention rates, and job satisfaction among newly graduated nurses.
- **References**: [1, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 15, 16, 19, 21, 22, 26]
- **Details**:
  - [1, 3, 5] highlight mentorship as a strategy to improve job satisfaction and retention.
  - [2, 7, 9] demonstrate organizational impacts such as lowered turnover rates.
  - [6, 10, 12] report on mentoring's role in enhancing professional transition.
  - [11, 16] review mentorship's broader effects on job competence and satisfaction.
  - [15, 21] focus on pre-graduation mentorship impacts on transition into practice.

Preceptorship and Orientation Practices

- **Description**: Focuses on preceptorship and structured orientation programs that support new nurses' transition into professional practice.
- **References**: [6, 8, 14, 17, 25]
- **Details**:
  - [8, 14] discuss the implementation of extended orientation programs facilitating transitions.
  - [6, 25] emphasize preceptorship within orientation programs as critical for new nurse integration.
  - [17] examines the role of structured internship programs in improving nurse retention and sense of belonging.

Clinical Simulations

- **Description**: Studies that examine the use of clinical simulations to improve skills and decision-making abilities of new graduate nurses.
- **References**: [Not directly detailed in the provided list]

Transition Programs Impact on Retention and Satisfaction

- **Description**: Papers assessing the effectiveness of transition programs on retention, job satisfaction, and competence.
- **References**: [10, 12, 20, 23, 24, 27]
- **Details**:
  - [10, 27] analyze structured programs with focus on satisfaction and retention improvements.
  - [20, 23] evaluate competence and satisfaction gains over time through longitudinal methodologies.
  - [24] studies the specific impacts and mechanisms of internship programs on retention rates.
